## Method and device for the determination of the thickness of the insulation of a flat ribbon cable in the region of the conductor paths.

## Abstract of the Disclosure

5

- 10 Method for the determination of the thickness of the insulation of a flat ribbon cable in the region of the metallic conductor paths, wherein one side of the flat ribbon cable is irradiated by means of an x-ray beam, and a detector on the same or on the opposing side of the flat ribbon cable measures the intensity of the x-ray luminescence radiation emitted by the respective conductor paths, the detector being 15 shielded against the x-ray radiation.
